- Grinder
- Hammer drill
- Extension leads
- Ladders
- Scissor lift/s (on larger jobs)
- Nail bag
- Personal Safety Equipment
- Ear Muffs
- Safety goggles
- Gloves
- Highly visible clothing
- Steel capped boots
- Sunscreen

## **NOT ALL DRILLS ARE EQUAL**

It is recommended that clutched screwdrivers are used over a cordless impact driver as the impact drivers place excessive force through the screw, often drilling at a much higher RPM compared to a clutched screwdriver. The excessive stress can cause the heads to snap off the screw, especially on the framing screws.

## **CAUTION**

Extreme caution is required when handling and working with steel. Take your time when moving the steel. Always wear safety goggles. Get an assistant to help you to ensure your safety and the safety of others on site.
